## Cheetah Daily Habits and Behaviors

### Open-Ended Response Answer Key

1. Cheetahs avoid fights because they are lightweight and not as strong as lions or hyenas, so fighting could lead to injury or losing their food.
2. Being diurnal helps cheetahs see their prey clearly and avoid nocturnal predators that are stronger.
3. A solitary cheetah might struggle to protect its food or territory compared to cheetahs in a coalition.
4. People can protect cheetahs by supporting conservation programs and protecting natural habitats from human development.
