## Cheetah Predators and Threats

### Open-Ended Response Answer Key

1. Habitat loss makes it harder for cheetahs to find food and stay safe, leading to population decline.
2. Protecting cheetahs from poaching helps preserve biodiversity and prevents species loss.
3. If cheetahs became extinct, the balance of prey and predators in their habitat would be disrupted.
4. Cheetahs stay safe by staying in open areas and avoiding larger predators.
