

Name _____

Mix It or Make It New? Understanding Chemical Changes

Open-Ended Response Answer Key

1. Baking cookies is a chemical change because the dough turns into something new in the oven.
2. It helps us understand science, cooking, and how the world works.
3. You can freeze water to make ice and melt it again to show a physical change.
4. You might not notice dangerous changes, or you could get confused when doing science experiments.
