

Name _____

How Do Chimpanzees Reproduce?

Short Answer Key

1. Chimpanzees find mates through social interactions, grooming, and vocalizations.
2. Mothers nurse, carry, and teach their babies important skills.
3. Chimpanzees can mate throughout the year because they don't have a fixed breeding season.
4. Baby chimpanzees learn survival skills by watching their mothers and group members.
5. A female may choose a mate based on strength or social status.
