## Chimpanzee Movement: Swing, Climb, and Walk

### Open-Ended Response Answer Key

1. Brachiation helps chimpanzees move quickly through the trees while searching for food.
2. Climbing and swinging help chimpanzees avoid predators and reach food high in trees.
3. Answers may vary, such as using brachiation for fun or to explore tall places.
4. Humans can learn about physical agility, balance, and adapting to environments from chimpanzees.
