## Chimpanzee Relationships with Other Species

### Short Answer Key

1. Mutualism is when both species benefit from an interaction.
2. Chimpanzees spread seeds by leaving them behind after eating fruits.
3. Ticks and lice are examples of parasites that affect chimpanzees.
4. Birds benefit by eating insects stirred up as chimpanzees move through the forest.
5. Commensalism benefits one species without harming the other, while mutualism benefits both.
