

Name _____

Exploring the World of City Planners

Short Answer Key

1. Communication skills are essential because city planners need to convey their ideas and plans clearly to colleagues, government officials, and community members. They also need to listen actively to gather input and feedback from various stakeholders.
2. During the project implementation phase, city planners oversee the construction and development of projects to ensure they align with the approved plans and specifications. They monitor progress, address any issues that arise, and ensure that the project stays on track.
3. City planners consider environmental sustainability by designing projects that minimize their impact on the environment. They may incorporate green spaces, promote public transportation, and encourage energy-efficient building practices. They also assess how projects affect natural habitats and resources.
4. A city planner might work on a project to revitalize a run-down neighborhood by developing affordable housing, creating green spaces and parks, improving public transportation access, and attracting businesses to stimulate economic growth.
5. Research is crucial for city planners because it provides them with data and information needed to make informed decisions. They research topics like population growth, traffic patterns, economic trends, environmental impact, and zoning regulations to develop effective urban plans.
