

Name _____

How Koalas Move: Climbing Masters

Short Answer Key

1. Koalas stay in eucalyptus trees for food and protection from predators.
2. Their sharp claws, padded paws, and strong limbs make them good climbers.
3. Koalas use a technique called "bridging" where they stretch across gaps.
4. Koalas avoid walking on the ground to stay safe from predators.
5. Koalas use their two thumbs to grip tree branches securely.
