

Name _____

How Koalas Move: Climbing Masters

Open-Ended Response Answer Key

1. Koalas have adapted to tree climbing for safety and easy access to their food source.
2. Their eucalyptus leaf diet provides low energy, so they move slowly and rest often.
3. If koalas lost their climbing ability, they would struggle to find food and escape predators.
4. Koalas' tree movement keeps them away from ground predators like dogs and foxes.
