

Name _____

Clownfish in Danger: Predators and Threats

Short Answer Key

1. Groupers, snappers, and sharks hunt clownfish.
2. Pollution harms clownfish by damaging coral reefs, which are their homes and food sources.
3. Coral reefs provide food and shelter for clownfish, helping them stay safe from predators.
4. Clownfish remove parasites by rubbing against sea anemones, which helps keep their skin clean and healthy.
5. Catching clownfish for aquariums reduces their population in the wild, making it harder for them to survive.
