## The Daily Life of a Cockroach

### Short Answer Key

1. Cockroaches are described as nocturnal because they are most active at night.
2. Cockroaches avoid being seen by hiding in cracks and moving quickly to escape threats.
3. Cockroaches find food at night using their long antennae to sense their surroundings.
4. Cockroaches gather in groups for safety and to communicate about food or danger.
5. Cockroaches can survive without food for weeks because they store energy in their bodies.
