

Name _____

The Incredible Composition of Blood: Red Cells, White Cells, and Platelets

Short Answer

1. Explain how the absence of a nucleus in red blood cells benefits their function.
2. Name one type of white blood cell and describe its role in the immune system.
3. How do platelets contribute to the process of blood clotting?
4. What is the primary function of plasma in the bloodstream?
5. Imagine you are a red blood cell. Describe your journey from the lungs to a distant body cell, highlighting your role in oxygen transport.
