

Name _____

The Truth About Saltwater

Short Answer Key

1. A pure substance is made of only one kind of material with the same properties throughout.
2. Salt (sodium chloride) and water (H₂O).
3. Because it contains two substances that are not chemically bonded.
4. You can separate the salt by letting the water evaporate.
5. The amount of salt in ocean water can change, showing it's not always the same mixture.
