

Name _____

Where Does The Matter in a Tree Come From as it Grows?

Short Answer Key

1. Sunlight, carbon dioxide, and water.
2. Glucose is a sugar that trees use to build their parts and grow.
3. Through their roots from the soil.
4. It is used to make glucose, which becomes part of the tree.
5. Because carbon dioxide from the air is used to build most of the tree's mass.
