

Name _____

Could Ancient Matter From Dinosaurs Still Be Part Of Your Body Today?

Short Answer Key

1. It breaks down and returns to the Earth, air, and water.
2. Through the food chain—plants absorb the atoms, animals eat the plants, and people eat the animals or plants.
3. Atoms are tiny building blocks of matter that make up everything around us.
4. Because they are not destroyed, only changed or moved into something else.
5. It explains how atoms travel through plants, animals, and people, linking everything.
