

Name _____

The Coral Triangle: Where the Ocean Comes Alive

Short Answer Key

1. Countries that are part of the Coral Triangle include the Philippines, Indonesia, and Papua New Guinea.
2. Coral reefs are important to marine ecosystems because they provide habitat and shelter for numerous marine species, support biodiversity, and contribute to the overall health of the oceans.
3. One specific threat to the Coral Triangle's marine life mentioned in the passage is climate change, which can cause coral bleaching and harm the ecosystems.
4. Some marine species you might encounter while scuba diving in the Coral Triangle include sea turtles, manta rays, whale sharks, and colorful fish species.
5. It is crucial to protect the Coral Triangle's delicate ecosystems to preserve its biodiversity, maintain the health of the oceans, and ensure that future generations can enjoy and benefit from this unique natural wonder.
