## What Does a Cricket Look Like?

### Short Answer Key

1. The head, thorax, and abdomen.
2. Male crickets produce their chirping sound by rubbing one wing against the other.
3. A cricket's antennae are so long to help them feel and smell their way around since they have poor eyesight.
4. Crickets blend into their environment using their brown, black, or green colors.
5. The ovipositor helps female crickets lay eggs in soil or plant stems.
