

Name _____

A Day in the Life of a Cricket

Short Answer Key

1. Crickets are described as nocturnal because they are active at night and rest during the day.
2. Male crickets chirp to attract females and warn other males to stay away from their territory.
3. Crickets stay safe during the day by hiding under rocks, leaves, or in small burrows to avoid predators.
4. Crickets communicate with each other through chirping sounds.
5. Crickets use their antennae to sense their surroundings, find food, and detect predators.
