

Name _____

Crocodile Behavior: Night Hunters of the Wild

Short Answer Key

1. Crocodiles are mostly active at night because it helps them hunt better and stay safe from the heat.
2. They catch prey by waiting quietly in the water and then lunging quickly.
3. Crocodiles bask in the sun to stay warm since they are cold-blooded.
4. Baby crocodiles squeak to call for their mothers when they need help or protection.
5. They cool themselves down by keeping their mouths open, a behavior called gaping.
