## Crocodile Reproduction: Guardians of the Nest

### Short Answer Key

1. A male crocodile attracts a female by making growling sounds and splashing water.
2. The female uses mud, leaves, and plants to build her nest.
3. A female crocodile can lay between 20 to 60 eggs at a time.
4. The mother stays near the nest to protect the eggs from predators.
5. Baby crocodiles make noises to signal the mother to help uncover the nest.
