

Name _____

Crocodile Communication: Nature's Silent Language

Short Answer Key

1. Baby crocodiles make chirping sounds to call for help.
2. Male crocodiles bellow during mating season to attract females and warn rivals.
3. A crocodile's wide-open mouth can signal warning or be a way to cool down.
4. Crocodiles can use low-frequency vibrations to communicate.
5. A mother crocodile carries her babies in her mouth and uses low growls to warn them of danger.
