## Where Do Deer Live?

### Open-Ended Response Answer Key

1. An ideal habitat for deer would have plenty of plants for food and places to hide, like a forest or grassland. These areas help deer stay safe from predators while finding food easily.
2. (Example) If I were a deer, I would spend my day grazing on grass and leaves. I would stay close to the trees so I could hide if I heard a predator nearby.
3. It is important for deer to live in different parts of the world so they can continue to thrive and play their role in different ecosystems.
4. If the environment changes, such as forests being cut down, deer might lose their habitats and struggle to find food and stay safe.
