

Name _____

Do Deer Form Relationships with Other Species?

Short Answer Key

1. Mutualism is when both species benefit from their relationship.
2. Ticks harm deer by feeding on their blood and spreading diseases.
3. Birds follow deer because the deer stir up insects for the birds to catch.
4. Deer help plants grow by spreading seeds through their waste.
5. A parasitic relationship involves one species benefiting while the other is harmed.
