## Defense Tactics: How Amphibians Protect Themselves from Predators

### Open-Ended Response Questions

1. Can you explain why camouflage is an effective defense tactic for amphibians?
2. How might the ability to detach their tails benefit certain species of salamanders in avoiding predators?
3. Describe a scenario in which a symbiotic relationship with another organism provides protection for amphibians.
4. Why might it be advantageous for some amphibians to be nocturnal rather than active during the day?
