

Name _____

Exploring the Arid Wonders: Unveiling the Desert Biome

Short Answer Key

1. The climate of the desert biome is characterized by arid conditions with little rainfall.
2. Examples of plant adaptations include thick waxy coatings and deep root systems.
3. Camels conserve water through their humped backs and efficient reabsorption of moisture from their urine.
4. Common geological features found in deserts include sand dunes, rocky plateaus, and mesas.
5. Deserts are considered fragile ecosystems due to their low rainfall and vulnerability to human activities.
