Name _____

Exploring the Diversity of Elements and Molecules in Nature

Open-Ended Response Questions

1. Why is it important to study the diversity of elements and molecules in nature?

2. Imagine a world with only a handful of elements and molecules. How would it be different from our world today?

3. Can you think of any practical applications where a deep understanding of elements and molecules would be beneficial?

4. Discuss the significance of the periodic table in chemistry and how it helps scientists understand and work with elements.
