## Where Do Dragonflies Call Home?

### Short Answer Key

1. Dragonflies live near ponds and lakes because they lay their eggs in water, and their nymphs live underwater.
2. Dragonfly nymphs need water and plants to hide and hunt for food.
3. Dragonflies can live in grassy wetlands, tropical rainforests, dry savannas, meadows, and parks.
4. Plants near water provide hiding places for nymphs and help adult dragonflies catch food.
5. Dragonflies are adaptable and can live in different habitats as long as there is water nearby.
