## Dragonflies: Nature's Skilled Hunters

### Short Answer Key

1. Dragonflies are carnivores, meaning they eat other animals, not plants.
2. Dragonflies use their legs to form a basket that traps insects in midair.
3. Dragonfly nymphs use a special lower jaw that shoots out to grab prey underwater.
4. Dragonflies help humans by eating mosquitoes and other pests.
5. Dragonflies like to eat mosquitoes and flies.
