

Name _____

What Does a Llama Eat?

Short Answer Key

1. Llamas eat plants such as grasses and shrubs.
2. Llamas are efficient eaters because they chew cud and have a three-chambered stomach.
3. Their stomach allows them to digest tough plants and absorb nutrients better.
4. Farmers feed llamas hay, grass, and special pellets made from plants.
5. Llamas do not hunt because they are herbivores and only eat plants.
