## What Does a Llama Eat?

### Open-Ended Response Answer Key

1. Llamas can survive in harsh environments because they eat tough plants and have a special stomach for digestion.
2. Being herbivores helps llamas find food in grassy and shrub-covered areas without needing to hunt.
3. If I cared for a llama, I would feed it hay, grass, and pellets because they provide the nutrients llamas need.
4. Llamas are useful to farmers because they can survive on tough plants, provide wool, and carry loads.
