

Name _____

The Role of Llamas in the Ecosystem

Open-Ended Response Answer Key

1. Animals like llamas help keep the environment balanced by supporting plant and predator populations.
2. Removing llamas could lead to overgrown plants, reduced soil health, and fewer food sources for predators.
3. Farmers benefit from llamas by using them to protect livestock and enrich soil.
4. Bison play a similar role by grazing on grasslands and fertilizing the soil with their waste.
