

Name _____

Where Do Elephants Live?

Open-Ended Response Answer Key

1. Elephants help shape their environment by creating pathways, water holes, and spreading seeds.
2. People can help by protecting habitats, stopping poaching, and supporting wildlife conservation.
3. Since elephants eat plants, they need areas with a lot of vegetation to survive.
4. If elephants disappeared, plants might not spread as easily, and other animals might lose water sources created by elephant activity.
