

Name _____

Koalas: Masters of the Eucalyptus Forests

Open-Ended Response Answer Key

1. Koalas stay in trees to stay safe from predators and find food easily.
2. Habitat destruction removes food sources and shelter, making it hard for koalas to survive.
3. If koalas couldn't eat eucalyptus leaves, they might struggle to find food and could face extinction.
4. As a park ranger, I would protect forests, educate the public, and create safe zones for koalas.
