

Name _____

The Fantastic Excretory Ensemble

Open-Ended Response Questions

1. Imagine a scenario where someone's kidneys are not functioning correctly, and waste products are building up in their bloodstream. How might this affect their overall health, and what potential health issues could arise?
2. Describe the role of the skin in waste removal through sweating. How does this process help maintain the body's internal balance?
3. How does the excretory system contribute to the regulation of blood pressure, and why is this regulation important for our health?
4. Think about a situation where the excretory system fails to maintain the body's acid-base balance. What are some potential consequences of this imbalance on a person's health?
