

Name _____

The Marvelous Map of Elements: Exploring the Periodic Table

Short Answer

1. Give an example of two elements that are in the same group on the periodic table and explain why they have similar properties.
2. How many elements are currently known to science?
3. Explain why the atomic number is a unique identifier for each element.
4. What do you think would happen if there were no periodic table to help scientists organize elements?
5. Name an element and its symbol from the periodic table.
