

Name _____

Debunking Dolphin Myths: Separating Fact from Fiction

Short Answer Key

1. Dolphins breathe air using lungs, while fish have gills.
2. Dolphins appear to have a permanent smile due to the shape of their mouths.
3. Dolphins might display aggressive behavior during mating season, when competing for food or territory, or when provoked.
4. One misconception about dolphins and natural disasters is that dolphins can predict earthquakes.
5. A potential downside of keeping dolphins in captivity is that they may experience stress, boredom, and health issues.
