## The Fantastic Journey: What Happens to Water After It Falls to the Ground?

### Short Answer

1. Explain the difference between infiltration and surface runoff.
2. Describe the processes of evaporation and transpiration and how they contribute to the water cycle.
3. How can human activities impact what happens to water after it falls to the ground? Provide an example.
4. Why is it important to understand the natural flow of water in the environment, especially in urban areas?
5. What are some factors that determine whether precipitation falls as rain, snow, sleet, or hail?
