

Name _____

Fantastic Frogs - Short Answers Answer Key

1. An amphibian is an animal that can live both in water and on land. Frogs are considered amphibians because they start life in water as tadpoles and later live on land as adults.
2. A frog's skin helps it breathe by absorbing oxygen from the water and air. It also serves as a protective layer and is sensitive to environmental changes.
3. Birds and snakes are two animals that eat frogs.
4. Frogs have a long, sticky tongue that they use to catch their prey quickly.
5. Poison dart frogs protect themselves by producing toxins that warn or harm predators.
