

Name _____

Amphibian Appetites: Exploring the Diet and Feeding Behavior of Frogs, Toads, and Salamanders

Short Answer Key

1. Most amphibians primarily eat other animals.
2. Frogs and toads catch their prey by extending their sticky tongues.
3. One example of prey for amphibians is small fish.
4. Many salamanders catch their prey by lying in wait and lunging forward.
5. The feeding behavior of many caecilians involves burrowing and feeding on invertebrates.
