

Name _____

Firefly Homes: Where Lightning Bugs Light Up the World

Short Answer Key

1. Fireflies prefer humid environments because they need moisture to survive.
2. Fireflies are commonly found near ponds and in forests or grasslands.
3. Fireflies are nocturnal, which means they rest during the day and are active at night.
4. Artificial light makes it hard for fireflies to see each other's glowing signals.
5. As larvae, fireflies eat pests like slugs and snails.
