## Firefly Families: The Secret of Lightning Bug Life

### Short Answer Key

1. Female fireflies flash their lights back to signal they are interested.
2. Fireflies' glowing lights help males and females communicate and find each other in the dark.
3. A female firefly can lay 50 to 100 eggs at one time.
4. Firefly larvae eat small creatures like snails, slugs, and worms.
5. Fireflies live as adults for only a few weeks.
