## Firefly Life Cycle: From Glow to Glow

### Open-Ended Response Answer Key

1. Glowing helps fireflies in different ways, such as protecting larvae from predators and helping adults find mates.
2. The pupal stage might be the most fascinating because it is when the firefly transforms into its adult form.
3. The larval stage is the longest because fireflies need time to grow and store energy before transforming.
4. Protecting habitats ensures fireflies have safe places to lay eggs, find food as larvae, and reproduce as adults.
