

Name _____

Fireflies: Nature's Tiny Lanterns

Short Answer Key

1. A firefly's light doesn't produce heat, unlike a lightbulb.
2. Firefly larvae eat pests like snails and slugs.
3. Female fireflies flash their lights to respond to male fireflies.
4. Fireflies are most active during summer evenings.
5. People can protect fireflies by reducing light pollution and protecting their habitats.
