## Fireflies Under Threat: Predators and Other Dangers

### Short Answer Key

1. Two predators of fireflies are frogs and birds.
2. Fireflies' glowing lights signal that they taste bad or might be toxic.
3. Fireflies need moist environments to lay eggs and find food.
4. Habitat loss takes away the places where fireflies live, hunt, and reproduce.
5. Humans can help protect fireflies by reducing pesticide use, protecting natural habitats, and lowering light pollution.
