

Name _____

Fluttering Beauties: Exploring the World of Butterflies

Short Answer Key

1. The four life stages of a butterfly are egg, larva (caterpillar), pupa (chrysalis), and adult.
2. Butterflies help plants reproduce by inadvertently transferring pollen as they feed on nectar.
3. Some species of butterflies migrate in response to changes in temperature and food availability.
4. Declines in butterfly populations can serve as indicators of environmental health because they are sensitive to changes in their habitat.
5. Butterflies hold cultural significance as symbols of beauty, transformation, and freedom in societies around the world.
