

Name _____

Fox Reproduction and Care for Young

Open-Ended Response Answer Key

1. Both parents caring for the kits ensures they get enough food, protection, and proper teaching for survival.
2. Kits start with their mother's milk, then move on to solid food like meat brought by the parents.
3. Learning from their parents teaches kits essential skills like hunting, hiding from predators, and finding food.
4. Young foxes might face predators, finding food on their own, and adjusting to living independently.
