

Name _____

Bones in Motion: How the Skeletal System Fuels Movement

Short Answer

1. Describe the role of tendons in the skeletal system.
2. Explain how levers work in the context of skeletal movement.
3. Give an example of a ball-and-socket joint and describe its range of motion.
4. How does the skeletal system support the body against the force of gravity?
5. Provide an example of a skeletal adaptation in an animal for a specific form of locomotion.
