

Name _____

Harnessing the Magic: How Magnets Generate Electricity

Open-Ended Response Questions

1. Explore the impact of electricity generation with magnets on reducing greenhouse gas emissions and the transition to cleaner energy sources.
2. Imagine a world without electricity generation through magnets. How might this affect our daily lives and the global energy landscape?
3. Investigate the potential for further innovations in harnessing the power of magnets for electricity generation. What advancements might we see in the future?
4. Reflect on the role of science education in promoting an understanding of electromagnetism and its applications in generating electricity. How can we inspire future generations of scientists and engineers in this field?
