

Name _____

What Do Giraffes Eat?

Short Answer Key

1. A herbivore is an animal that only eats plants and not meat.
2. Giraffes avoid sharp thorns by using their thick lips and careful eating techniques.
3. Their long tongues help them reach and grab leaves from tall trees.
4. Drinking water is challenging because giraffes have long legs and must spread them wide to lower their necks.
5. By eating leaves from tall trees, giraffes make space for new plants to grow.
