

Name _____

How Do Giraffes Communicate?

Short Answer Key

1. Giraffes produce bleats, grunts, snorts, and low-frequency hums to communicate.
2. They raise their heads high and stare at the danger.
3. Necking helps male giraffes compete for dominance.
4. Giraffes use scent glands on their legs to help their calves find them.
5. Cooperation at waterholes shows how giraffes work together for safety.
